- Transportation of equipment from your site to our warehouse •
 - Eliminate the cost of storage •
- 12 month warranty offered on all refurbished equipment sold •
 - Equipment resold to our established global customer base •
- Guaranteed responsible recycling of unusable end-of-life hardware •

Deinstallation & Sales Consignment Service

Comtek's deinstallation & sales consignment service enables customers to effortlessly turn their unused Telecoms & Network equipment into hard cash. Our specialised team of highly-skilled engineers can either work independently or alongside the customer's own engineers to deinstall and remove excess equipment from the owner's network infrastructure.

Once the equipment is transported to Comtek's dedicated consignment stock warehouse, the equipment will be tested and assessed in our in-house testing laboratories. Any necessary repairs or re-manufacturing will be performed as necessary. Our system will provide full transparency and visibility of your consigned equipment.

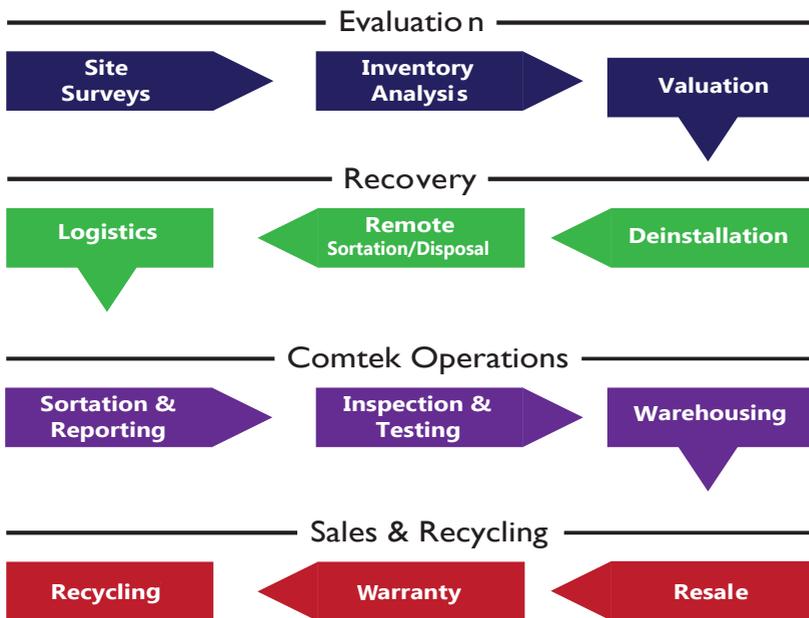

Comtek's dedicated sales team will then use its global customer-base to resell the tested/re-manufactured equipment and offer a full 12-month Comtek warranty. Profits from the product consignment sales will be split between Comtek and the original owner of the equipment.

Let us help you to maximize the financial return on your excess network infrastructure

COMTEK

Comtek Deinstallation Case Study

- Deinstallation of sites for a major telecoms operator
- Sites include geographically challenging locations
- Recovered equipment is moved to an in-country hub for shipment back to Comtek's Operations facility in the UK. Local scrapping takes place where possible
- All equipment is fully catalogued and made visible
- Equipment is sold by Comtek through our global sales network, at maximum market value
- Weekly reports are generated for the sites visited and deinstalled

"The decommissioning of communications networks is becoming a growing topic of interest to our customers. We have the facilities and collaborative partners in place to ensure that the evaluation, deinstallation, recovery and disposal of redundant network equipment generates significant revenue streams. 90% of wireline operators and over 60% of wireless operators intend to decommission legacy networks during the next three years."

- Mark Watson, Chief Development Officer, Comtek Network Systems
